L4 ANSWER 2 OF 3 HCAPLUS COPYRIGHT 2005 ACS on STN

ACCESSION NUMBER: 2003:238719 . HCAPLUS

DOCUMENT NUMBER: 138:398528

TITLE: Biosynthesis of structurally unique fungal metabolite GKK1032A2: indication of novel carbocyclic formation mechanism in polyketide biosynthesis

AUTHOR(S): Oikawa, Hideaki

CORPORATE SOURCE: Department of Applied Bioscience, Graduate School of Agriculture, Hokkaido University, Sapporo, 060-8589, Japan

SOURCE: Journal of Organic Chemistry (2003), 68(9), 3552-3557

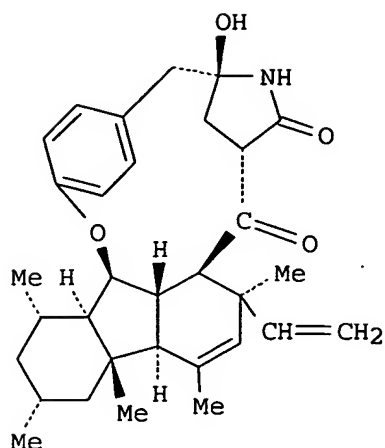

CODEN: JOCEAH; ISSN: 0022-3263

PUBLISHER: American Chemical Society

DOCUMENT TYPE: Journal

LANGUAGE: English

GI

AB The biosynthesis of the antitumor agent GKK1032A2 (I) was investigated by administration of isotopically labeled (^{13}C and ^2H) precursors to *Penicillium* sp. GKK1032. These studies showed that the backbone of I is constructed from L-tyrosine and a nonaketide chain flanked with 5 Me groups, probably by a polyketide synthase and a nonribosomal peptide synthetase hybrid. On the basis of the oxidation level of the starter unit and unusual 13-membered macroether formation between the tyrosine hydroxy group and the polyketide chain, novel cyclization mechanisms on the formation of a tricyclic system and a macroether have been proposed. Involvement of a similar type of cyclization in the biosynthesis of structurally related metabolites is discussed.

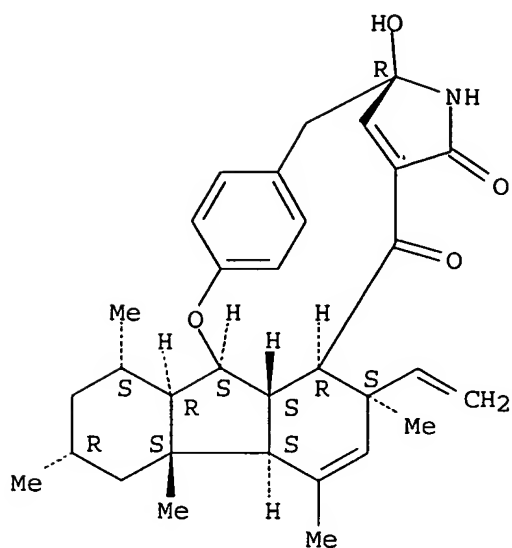

IT 529481-13-8

RL: BSU (Biological study, unclassified); BIOL (Biological study)
(indication of novel carbocyclic formation mechanism in polyketide biosynthesis in the biosynthesis of structurally unique fungal metabolite GKK1032A2)

GI

AB Pyrrocidines A (I) and B (II), two new antibiotics, containing rare 13-membered macrocycles, were isolated from the fermentation broth of a fungus, LL-Cyan426. Pyrrocidine A exhibited potent activity against Gram-pos. bacteria, including drug-resistant strains. The structures of these compds. were established using spectroscopic methods.

AB The biosynthesis of the antitumor agent GKK1032A2 (I) was investigated by administration of isotopically labeled (^{13}C and ^2H) precursors to *Penicillium* sp. GKK1032. These studies showed that the backbone of I is constructed from L-tyrosine and a nonaketide chain flanked with 5 Me groups, probably by a polyketide synthase and a nonribosomal peptide synthetase hybrid. On the basis of the oxidation level of the starter unit and unusual 13-membered macroether formation between the tyrosine hydroxy group and the polyketide chain, novel cyclization mechanisms on the formation of a tricyclic system and a macroether have been proposed. Involvement of a similar type of cyclization in the biosynthesis of structurally related metabolites is discussed.

AB Pyrrocidines A (I) and B (II), two new antibiotics, containing rare 13-membered macrocycles, were isolated from the fermentation broth of a fungus, LL-Cyan426. Pyrrocidine A exhibited potent activity against Gram-pos. bacteria, including drug-resistant strains. The structures of these compds. were established using spectroscopic methods.
